

10 Seed Starting Pots Made from Recycled Materials

It's that time of year to start planning your garden and what better way to do it than to use recycled containers and save money! That rotisserie chicken container will work great to start seedlings in, or how about the box that you purchased your canning jars in? It already comes with dividers! Most of these items we all have lying around the house. All you need to purchase is some potting soil. Fill your containers with potting soil, sprinkle some seeds, lightly cover, water and voila you now have a mini greenhouse. For more in-depth information, visit <http://www.lifehack.org/articles/lifestyle/10-seed-starting-pots-made-from-recycled-materials.html>. Happy gardening everyone!
